TECHNICAL DATA SHEET

Nutrilen Oil

NUTRILEN oil, the result of the manufacturer's experience, research and tradition in woodworm treatment, combines several properties in a single product. As it is not based on silicone products, it does not form a film and preserves the original characteristics of the object, renewed and clean. Its effectiveness is guaranteed by the quality of its components.
CLEANING — cleans the treated object of fingerprints, halos, stains, etc., leaving a glossy, non-greasy finish.
NOURISHING — based on natural products, it nourishes the wood; through absorption it penetrates and moisturises the fibres, renewing and enhancing their characteristics, preventing drying, cracking and potential insect infestations.
COVERING — its colour has been deliberately kept light yet sufficient to cover any scratches, so it can be applied to various types of wood with different shades.
WATER-REPELLENT — protects from water especially objects exposed outdoors, preventing it from entering and damaging the wood fibres.
ANTISTATIC — keeps dust away from the treated object, so that it does not settle in the cracks.
APPLICATION — suitable for treating all wooden items, particularly furniture, floors, parquet, fixtures, doors, external gates and structures exposed to the weather; its convenient spray dispenser makes application easier.
INSTRUCTIONS FOR USE — Shake well before use. Spray onto the wood to be treated, wipe with a soft, dry cloth. Allow the wood to absorb the product; with another cloth remove excess oil and polish the surfaces.

Packaging

500 ml with spray dispenser (pack of 12).
