TECHNICAL DATA SHEET

Spolverol

Cleaner for metal, plastic and laminates

SPOLVEROL, based on an early-twentieth-century recipe kept intact in its essential components and later refined for easier application, gives shine to metal, plastic and laminates. Thanks to its natural formulation it does not form a film and restores the object's original, natural shine.
CLEANER — cleans the treated object of fingerprints, halos, stains, etc., leaving a glossy, non-greasy finish.
POLISH — polishes chromed, painted and anodised metals (aluminium fixtures, cars, bicycles and motorcycles), plastic and plastic laminates.
ANTISTATIC — keeps dust away from the treated object, so that it does not settle in the cracks.
CHARACTERISTICS — does not stain, grease, corrode or damage objects made of the materials mentioned above.
INSTRUCTIONS FOR USE — Shake well before use. Spray onto a cotton or linen cloth, wipe the object to be treated, allow the product to act for a few moments, then remove the excess and polish with a clean cloth.
